ABOUT ME

I am a dynamic person, I can quickly adapt to changes. I like what I do and I really want to learn, that's why I continue training myself day by day in a self-taught way to grow as a professional. I have communication skills to work in a team. Now I'm looking for the opportunity to join a technology company, although at the moment I work autonomously.

WORK EXPERIENCE

FREELANCE

2012 - present

● I am currently working freelance in web development, digital marketing, and graphic design. I have completed various projects, including creating institutional websites, e-commerce or personal projects, as well as digital marketing, logos, and other graphic pieces. The skills I have acquired the most during this time are communication and empathy with people. In general, 'the client' is a single person, but on some occasions, there are multiple individuals I have to deal with. This is where my experience as a graphic designer allows me to quickly interpret their needs to provide the right solution for their product or service and effectively achieve the objectives.
